

PRODUCT BULLETIN

Yale Window Shootbolt

Window Shootbolt

Yale, the well respected manufacturer of door locks and security products, has introduced its own shootbolt lock for outward opening casement windows.

The product fits most popular PVCu systems as a comprehensive range of striker plates is available. Please see VBH Striker List for current listing.

VBH stocks the Yale shootbolt in two options. The Standard version requires the fabricator to crop the extensions to size, and this covers sash rebate sizes from 326 – 1420mm. As its name suggests, the Non-Crop version requires no cropping as the excess length of the extensions is concealed under an extended front cover plate. This vastly speeds up production on windows with sash rebate sizes between 476 – 1520mm, making Yale Non-Crop one of the simplest shootbolts to fit available today.

The central gearbox features a pair of mushroom cams that travel in opposing directions to locate in 2 separate striker plates. This provides an extremely strong locking point that helps the product to conform to the requirements of BS7950 and, consequently, gain its Secured By Design licence.

Benefits at a glance:

- Secured By Design approved
- Conforms to requirements of BS7950
- Non-Crop version speeds up production time and reduces waste
- Covers large sash rebate range; 326 – 1520mm
- Compatible with a wide range of PVCu profile systems
- In stock at VBH (GB)
- Carries the Yale badge of quality backed up by a 10 Year mechanical guarantee
