greenteQ Clearlift Lift/Slide Hardware

Lift/slide doors are gaining in popularity due to their ability to carry very large and very heavy sashes.

The large glazed areas provide uninterrupted views and maximise the natural light.

Many people prefer the fact that the sashes slide parallel to the side, rather than folding back to 90° as a bi-fold does.

The new greenteQ Clearlift system is the ideal hardware solution for lift/slide doors, as it copes with all the demands of carrying large, heavy elements, and is very easy to fit.

Clearlift can cope with sashes weighing up to 300KG, with a maximum sash width of 3330mm and height of 2700mm where the systems company's specification allows.

The system has been developed initially for aluminium doors, but further developments will include versions for PVCu and timber.

The Clearlift drive gear is lockable via a Euro profile cylinder. Depending on the handle used, the fabricator can manufacture a non-locking or lockable door with a handle on the inside only, or a lockable door with handles on the inside and outside.

greenteQ's Aspire lift/slide handle range is the ideal partner for Clearlift, as it offers all the above-mentioned solutions in a choice of 9 attractive colours split over zinc and stainless steel levers.

Clearlift has been cycle tested to 25,000 operations.

Tracks are swept by integral cleaning brushes within the bogie assemblies to ensure a smooth sliding action every time.

There is a night vent facility to enable trickle ventilation.
