greenteQ Clearline SecuriFold Folding Door Handle

greenteQ Clearline SecuriFold Folding Door Handle

The greenteQ Clearline SecuriFold door handle has been developed with bi-fold and Slide & Fold doors in mind. When stacking such doors in the open position, there has always been an issue with the sashes not folding back neatly because of the projection of the door handle on the main opening sash. These typically hold the sashes apart by 70-80mm; not so with SecuriFold.

The clever design of the handle allows the lever to fold down vertically when not in use and locate snugly against the backplate. When operating the door, the user simply pushes the lever in at the top to allow them to move it from the vertical inactive to the horizontal active position. The handle is then used in the normal way to operate the door lock and then moved back to the inactive position when the door is left open or the locking points have been thrown and the door is secure.

When the handle is in this position it stands off the profile by only 25mm so the other sashes are not held away from the main sash when stacked in the open position.

An additional benefit is that the lever cannot be seen through the glass when the doors are closed so they do not impair the view.

The internal and external levers operate independently of each other and the location peg on the backplate prevents any rattle when the levers are inactive.

SecuriFold works with standard 92mm PZ locks and has the same fixing centres as the standard greenteQ Alpha long backplate door handle.

SecuriFold is available in 5 colours and can also be used on residential doors to prevent the lever from clashing when the door opens onto a wall.

Clearline SecuriFold Folding Door Handle greenteQ

Benefits at a glance:

- Works with most multi-point 92PZ door locks on bi-fold and resi-doors
- Levers fold vertically against backplate when not in use to allow neat stacking of Invisifold or bi-fold doors and to provide clear sightline through glass when closed
- Can be used on resi doors to prevent the lever clashing against the wall
- Stands off profile by only 25mm in inactive position
- Top of lever pushes in to allow turn action
- Accepts standard or security Euro profile cylinders
- Location peg holds the lever in place in inactive position to prevent handle rattle
- Internal and external levers operate independently
- Identical screw centres to standard long backplate Alpha door handle
- Covered by the greenteQ 10 year guarantee
- The SecuriFold handle is also included in the Q-secure scheme
