greenteQ

greenteQ iQ Security Espagnolette Window Lock

The iQ Security Window Lock from greenteQ is a top quality security window espagnolette for outward opening rebated and flush windows.

The lock features combination locking points that pair adjustable and floating mushroom headed cams to provide smooth operation and high levels of security.

The adjustable cam has +/-0.75mm compression adjustment, while the fixed cam provides additional anti-separation strength, spreading the load across the striker plate.

The lock is available in industry standard 20 and 22mm backsets, and with a choice of 7.7 and 9mm mushroom cams.

11 sizes, from 200mm to 1350mm, ensure that locking points are always close to the corners of the window, ensuring optimum security.

As all the fixings are applied from one direction, and it is a single piece item, iQ is quick to fit and can help reduce factory production times when compared with other types of locking mechanisms.

Striker plates provide a night vent position and are available to suit a wide range of profiles.

The handing of the striker plates on side hungs is taken from the handing of the hinge viewed from outside. i.e. if the hinge is on the right, fit RH keeps. On top hung vents, the handing is taken from the direction that the handle grip points to. For example, if the handle grip points to the left from the gearbox viewed from outside, fit LH keeps.

iQ is also available in an Easy Access version, where the handle height is set at 195mm from the bottom of the window sash for applications where a low handle is required, such as in lifetime homes compliance situations. Easy Access versions are available in 6 lengths starting at 550mm.

The iQ Security Espagnolette Window Lock is ideal for consumers who are keen to integrate their windows into a smart home network, as it is supplied ready to work with a Kubu® smart home hub. Please read further down the Product Bulletin for more information on the capabilities of windows connected to Kubu®.

Flush window manufacturers can benefit from the mechanical security features of the iQ Security Espagnolette, although these are not currently compatible with the Kubu® home hub. The flush window version is a handed product, due to the need to feature an offset cam plate to facilitate a night vent.

iQ Security Espagnolette Window Lock greenteQ

All iQ Window Lock variants have been tested to PAS24:2016 and are cycle tested to 50,000 operations. iQ is built to last, with 240 hours neutral salt spray test performance according to BS EN 1670:2007

iQ is covered by the greenteQ 10-year performance guarantee and is rated as a Q-secure PREMIUM product.

A little more about the Kubu® Hub...

VBH does not sell the Kubu® Hub, but as iQ Works with Kubu®, this is a good place to list some more of its features.

Windows and doors fitted with iQ locks can be linked to a Kubu® Home Hub, but they do not have to be. It is entirely the choice of the homeowner. They can decide at any time to link, and setting up Kubu® monitoring is easy. All they need to do is buy a Kubu® hub and sensors from www.kubu-home.com, download the app, and then connect.

When the lock is linked to the hub, the user can quickly check on the locked status of their windows via an easy to use app. The app will tell the user at a glance if the cams are in the Secure, Partially Secure, Night Vent, or Open position. The user can set reminders to open or close windows, and get alerts whenever a window is operated. They can also check on the open/close history of a window. Kubu® also works with products such as Amazon Alexa or Google Nest to link to other items in a home network such as lighting or cameras.

iQ window locks are fitted with a magnet in the gearbox. When linked to Kubu®, this works with a sensor on the outer frame that monitors the position of the locking points within the striker plate. A fixed guide pin next to the gearbox ensures that the lock and striker plate are perfectly aligned, to ensure accurate readings.

Benefits of Kubu® connection at a glance:

- Kubu® links windows (and doors) to a smart home network, allowing the user to check on the security status of the home via a phone app. It can also be linked to other connected devices around the home via Alexa, Nest etc.
- As well as Kubu® enabled security window espagnolettes, the greenteQ iQ range also includes multipoint door locks. The Kubu® Hub will allow the user to connect up to 20 casement sashes and 10 doors, offering peace of mind across the home.
- The Hub's range is around 25m, so it should be more than adequate for most homes. If necessary, a second Hub could be purchased.
- All Kubu® sensors are powered by standard cell batteries which will typically give a life of around 18 months. They will alert via the app when they need to be replaced.
- Kubu® Hubs and accessories should be purchased direct from Kubu® via www.kubu-home.com.

Note: The grey sensor depicted on the front of this Product Bulletin is supplied by Kubu®, and not by VBH. This should be ordered direct from www.kubu-home.com.
